

We are looking for a co-founder for a medtech start-up as a software developer

Our vision: Cancerous tumors will not only be removed more quickly, but also fewer patients will require follow-up surgery and costs will be saved in the healthcare system.

For this purpose, we are developing a special microscope as part of an EXIST Forschungstransfer that can be used directly in the operating room, where it helps the surgeon to identify the tumor margins more easily and with higher confidence.

Support us by advancing our software written in Rust. Among your **tasks** will be:

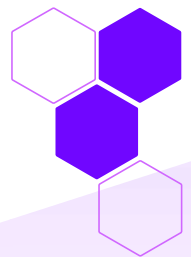

- UI and UX design
- image processing
- hardware-based programming
- collecting user feedback
- documentation for the IVDR certification

Our **requirements** are:

- bachelor's degree or higher
- experience in software development
- start-up attitude

We offer you:

- shares in the future company
- a TVÖD-VKA E13 position until at least September 30th 23 at Medizinisches Laserzentrum Lübeck
- after successful funding: employment in the start-up
- flexible working time and place
- actively shape the future of the company and the product

Interested? Contact us!
